

KAMIN

What exists but has never been found

K A M I N

It exists. Nobody has seen it.

A live map of what Saudi Arabia can actually supply.

“Is there a local supplier?”

A question so simple you would expect one of these to answer it:

ChatGPT

Is there a local supplier for a 2-inch ball valve?

I can't say for certain. You would need to check local sources such as chambers of commerce or supplier directories...

Answers with confidence. Has no Saudi data.

Product label

Saudi Made
40% local value added

A mark on a product, not a supplier directory.

suppliers_approved.xlsx		
	A	B
1	Supplier	Category
2	Gulf Supplies Co.	Valves
3	Al Ruwad Trading Est.	Spare parts
4	...	...

Only holds who we have bought from before.

And the truth? Nobody can answer it.

PIF has more than **150 companies** buying every day: steel, valves, cables, chemicals, equipment. A large share of it comes from abroad.

Case one

For a good reason

Genuinely nobody makes it locally.

Case two

For a sad reason

Someone makes it two hours away, and nobody knows they exist.

Case three

Because they do not fit

We found them, local and real. But their lead time is longer than the company can carry, or their quality sits under its bar. And every company sets a different bar.

And to this day, nobody can tell the three apart.

👋 We only know who raises their hand

To find out what a Saudi factory can supply, it has to tell you. Every supplier directory in existence is a list of who raised their hand.

Imagine a phone book you only appear in if you submit a form. **And who submits forms?** Large companies with sales teams whose job is submitting forms.

The workshop in Al-Kharj that has been machining precision parts for twenty years? Not in the directory. Never will be.

And it is exactly the one you were looking for.

Even though it:

- ✓ has won past government tenders
- ✓ has its products registered with the Ministry of Industry
- ✓ has published conformity certificates
- ✓ has a commercial register stating exactly what it does

✗ **It just is not on your supplier list.**

The same item, three different names

More than 150 companies, each with a different procurement system, two languages, and free text.

● ● ● Portfolio company A · SAP MM					
PR No.	Line	Description	Qty	Lead time	Standard Date
PR-2026-0142	0010	<u>صمام كروي 2 بوصة</u>	12 EA	30 days	ISO 9001 2026-01-14

● ● ● Portfolio company B · Oracle iProc					
PR No.	Line	Description	Qty	Lead time	Standard Date
REQ-88213	003	<u>BALL VLV 2IN SS</u>	40 PCS	45 days	API 6D 14/01/2026

● ● ● Portfolio company C · Excel					
PR No.	Line	Description	Qty	Lead time	Standard Date
-	7	<u>Valve, ball, stainless, 2 inch</u>	5 units	6 wks	ISO 9001 Jan 14

Exactly the same thing. Under three names, three lead times and three standards.

The data exists, but it is scattered

A good researcher spends one afternoon and comes back with a report on **one factory**.

9 sources		The sources they have to open for every single factory	
	Monafasat	Government contract awards	✓
	Tarmeez · Ministry of Industry	National product catalogue	✓
	Saudi Made	Local content certificate	✓
	Local Content Authority	Local content calculation methodology	✓
	GASTAT	Imports by product code	✓
	HRSD	Saudization and headcount	✓
	Ministry of Commerce	Commercial register and actual activity	✓
	Saudi Contractors Authority	Contractor grading and capacity	✓
	Company site and registry	Catalogue, certificates, commercial register	✓

Nobody has done it because it takes **five years**.

One factory needs a full day, and **13,000 factories** need five years.

And the moment you finish, it is **out of date**!

Which is why it is a multi-million riyal consulting project, not a product.

So what is the fix?

Simple. **We hire a team.**

Four people. Here is what each of them does the moment a purchase request is raised in a company system.

The Coordinator

Understands the request and pools it

The Detective

Finds who can supply it

The Auditor

Verifies and classifies

The Advisor

When nobody can

The Coordinator

Understands what the item is, and pools matching requests into one

Company A

2-inch ball valve

12 units

Company B

BALL VLV 2IN SS

40 units

Company C

Valve, ball, stainless

5 units

HS 8481.80 · 57 units now · 40,000 a year historically

One pooled request

The demand was scattered because **nobody could see it was the same request.**

The Detective

One per candidate supplier

Pooled demand: 40,000 units a year across nine companies

Input

Reads company websites, checks the commercial register, sees who won similar contracts on Monafasat, finds certificates and reads catalogues.

And the question changes: not “who makes this?” but “who can serve this volume?” That opens up suppliers a single company order could never justify.

Output: candidates who can serve the volume, each with its evidence.

The Auditor

They work in two places on the map, not one.

After the Detective

Capability audit

Input: the candidates the Detective found

They do not strike the trader out, they classify them: manufacturer, assembler, authorised distributor, or trader. And they give every capability its UNSPSC code, the one MUSAHAMA speaks.

After the Coordinator

Request audit

Input: a new pooled order, and the companies' bars

They return the map ranked for this company in particular: the lead time it can carry, the standards it requires, and the class it accepts.

Because a supplier that fits one company does not necessarily fit the next.

The Advisor

They do not stop at the gap. They hand you a ladder of options, cheapest first.

- | | | |
|---|-----------------|--|
| 1 | Buy it | One supplier can serve the volume today |
| 2 | Split it | Several local suppliers together, so the volume does not exclude the small ones |
| 3 | Invest | “Could you, if we expanded your capacity?” Capex, against a contract for the volume |
| 4 | Partner | “Could you bring a global manufacturer in with you?” A joint venture, and knowledge transfer |
| 5 | Localise | Nobody can, so PIF brings the industry itself into the Kingdom |
| 6 | Import | No option above works. The gap is logged with its annual value. |

And the pooled order is what makes the investment possible. A one-off order does not finance a factory.

Four people. To cover 12,946 factories you would need thousands of them, and you would still wait five years.

But we do not hire them.

We run them.

And you run four thousand as easily as four. Five years becomes under ten hours.

AI agents

Two minutes per factory, not a day

24 hours, no stopping

They never forget a thing

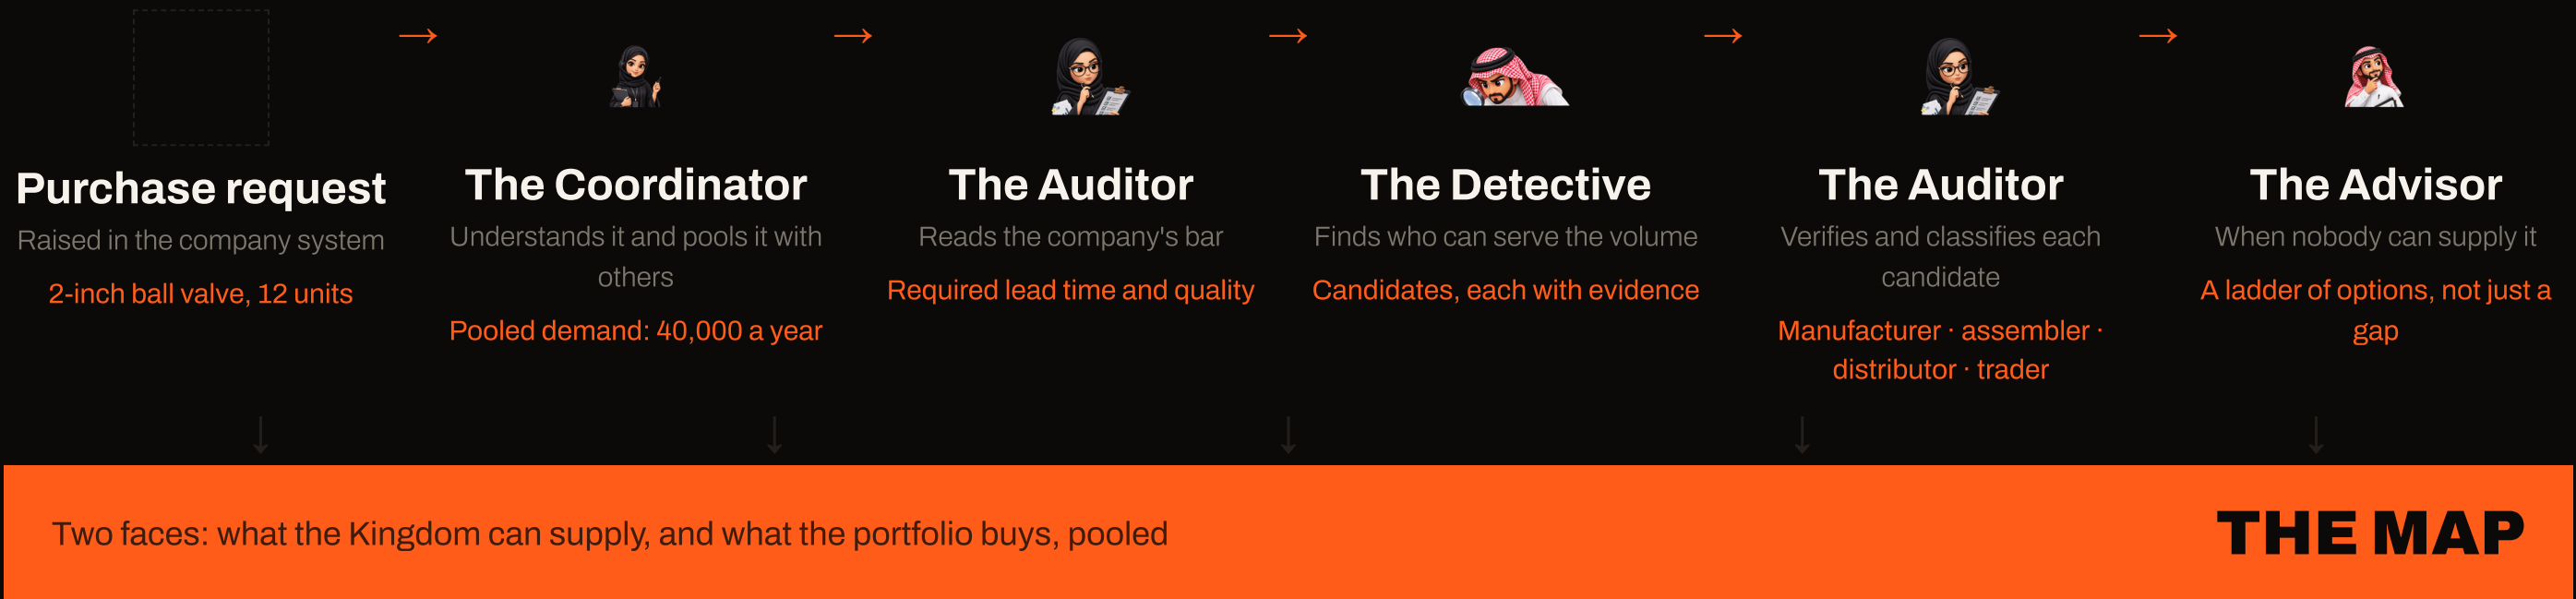

Not answers. A **map.**

Two faces: what the Kingdom can supply, and what the portfolio buys, pooled

The journey of one request

From a small line in one company system to a deal a local supplier can serve

Vetted supplier list
With their class and evidence, and the demand split between them if no one can carry it alone

Gap register
Pooled demand with its annual value, waiting for the first to supply it

Coverage rate
How much of the portfolio spend we can buy from here

We found them. So how do we reach them?

Each stage runs only on whoever did not answer the last

Stage one

Email

We wait 5 days

~ \$0.0001

The large ones with sales teams answer here. And most of them were registered already.

Stage two

WhatsApp

We wait 3 days

~ \$0.04

With the registration link. The small workshop reads WhatsApp, not corporate email.

Stage three

Voice agent

Calls whoever is left

< \$1.00

A call in Arabic. By here the number is small, so the call is worth making.

The expensive channel only ever reaches the few who are left.

Which is how we reach the smallest workshop. Not generosity, arithmetic.

And the link takes them to MUSAHAMA registration. KAMIN is an internal system, with nothing on it for the supplier.

	The old way	KAMIN
Time	5 years	Under 10 hours
Cost	Millions of riyals	Under \$4,000
Freshness	A report born stale	Updates itself

The expensive part was never the thinking. It was the number of days.

MUSAHAMA knows who
registered.
KAMIN knows who never
raised a hand.

The first is a list of names that raised their hand. The second is a map of what actually exists, including everyone who never raised theirs.

We are not a replacement for the platform. We are the layer underneath it.

Three people. **Thousands of agents.**

The team building KAMIN.
