

KAMIN

What exists but has never been found

K A M I N

A live map of local industrial capability.

“Is there a local supplier?”

A question so simple you would expect one of these to answer it:

ChatGPT

Is there a local supplier for a 2-inch ball valve?

I can't say for certain. You would need to check local sources such as chambers of commerce or supplier directories...

Answers with confidence. Has no Saudi data.

Product label

Saudi Made

A mark on a product, not a supplier directory.

suppliers_approved.xlsx		
	A	B
1	Supplier	Category
2	Gulf Supplies Co.	Valves
3	Al Ruwad Trading Est.	Spare parts
4	...	...

Only holds who we have bought from before.

And the truth? Nobody can answer it.

The Fund's companies buy from foreign suppliers, **for three reasons.**

Reason one

For a good reason

Genuinely nobody makes it here.

Reason two

Because they do not fit

Its quality, its lead time, or a different standard.

Reason three

For a sad reason

Someone makes it two hours away, and nobody knows they exist.

Why?

Why we do not know them, and why they do not fit.

👉 We only know who raises their hand

To know them, they have to reach you.

And picture a factory in Al Kharj, twenty years old, that you have never heard of, and it is exactly what you were looking for.

- Even though it:
- ✓ has won past government tenders
 - ✓ has its products registered with the Ministry of Industry
 - ✓ has published conformity certificates
 - ✓ and its manufacturing origin is on record
- ✗ It just is not on your supplier list.

The same item, three different names

Portfolio company A · SAP MM		
Description	Lead time	Standard
Ball valve 2 in	30 days	ISO 9001

Portfolio company B · Oracle iProc		
Description	Lead time	Standard
BALL VLV 2IN SS	45 days	API 6D

Portfolio company C · Excel		
Description	Lead time	Standard
Valve, ball, stainless, 2 inch	6 wks	ISO 9001

The data exists, just scattered

9 sources		per factory
	Monafasat	✓
	Tarmeez · Ministry of Industry	✓
	Saudi Made	✓
	Local Content Authority	✓
	GASTAT	✓
	HRSD	✓
	Ministry of Commerce	✓
	Saudi Contractors Authority	✓
	Company site and registry	✓

So what is the fix?

KAMIN

What exists but has never been found
K A M I N

A platform of **AI agents** that runs itself, around the clock.

It builds the Fund a map of local industrial capability, sets it against the portfolio's pooled demand, and carries the journey through to the supplier.

Autonomous

Multi-agent

It never stops

The output

Verified suppliers

Gap register

Coverage rate

Simple. **We hire a team.**

The Coordinator

The Detective

The Auditor

The Advisor

We do not hire them. **We run them.**

AI agents

Two minutes per factory, not a day

24 hours, no stopping

They never forget a thing

So why has nobody done it yet?

Factories in the Kingdom, 2025

12,946 factories

And each one needs

a full day

which is **35 years**

And the day you finish, what you know is **out of date!**

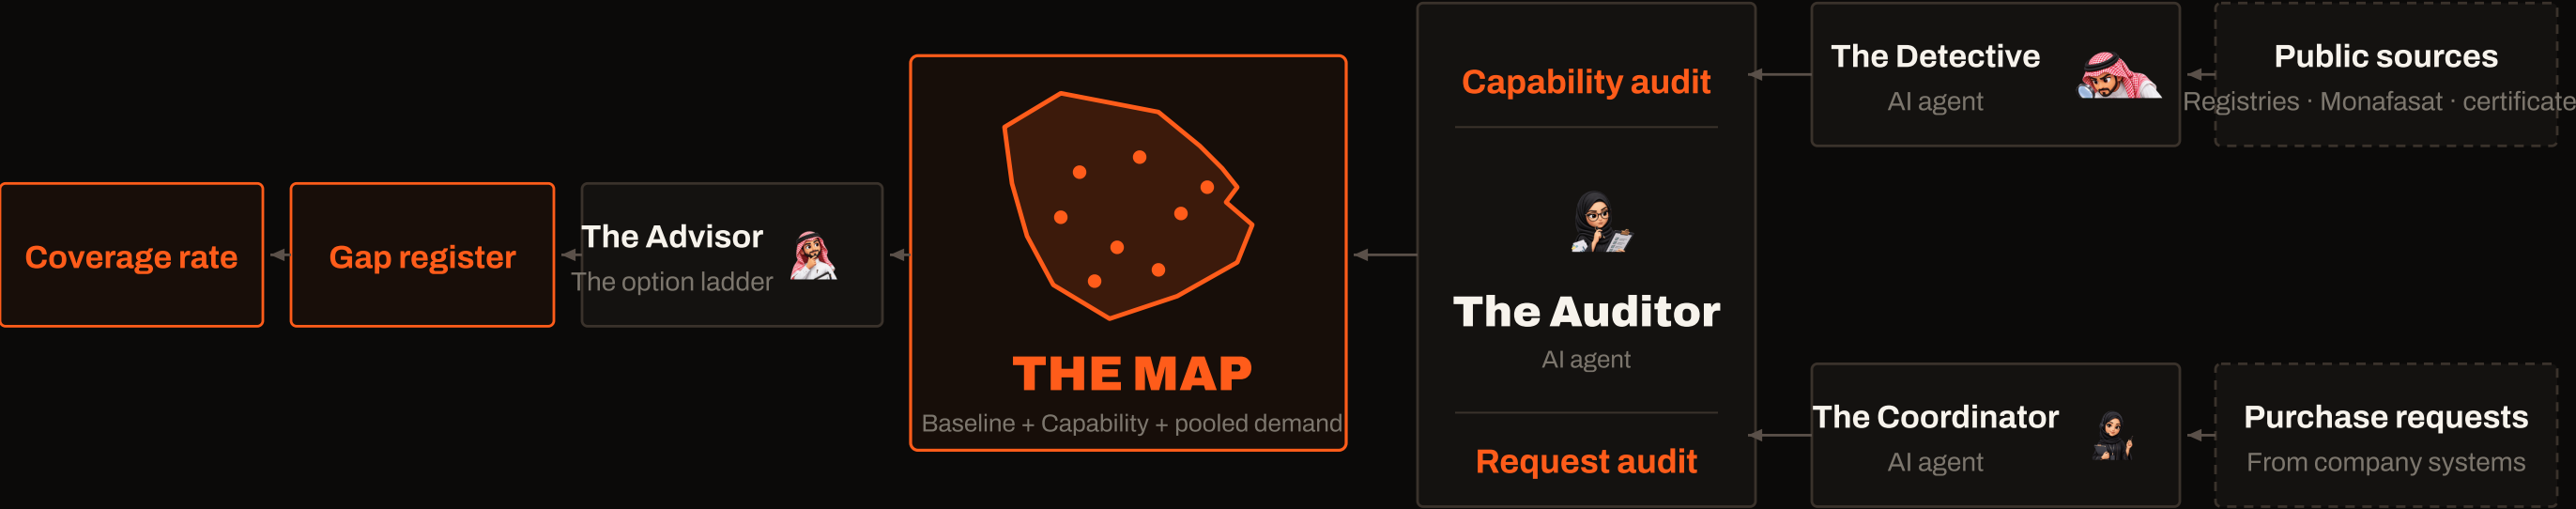

So why now?

Because what took a researcher a full day is now done by an AI agent:

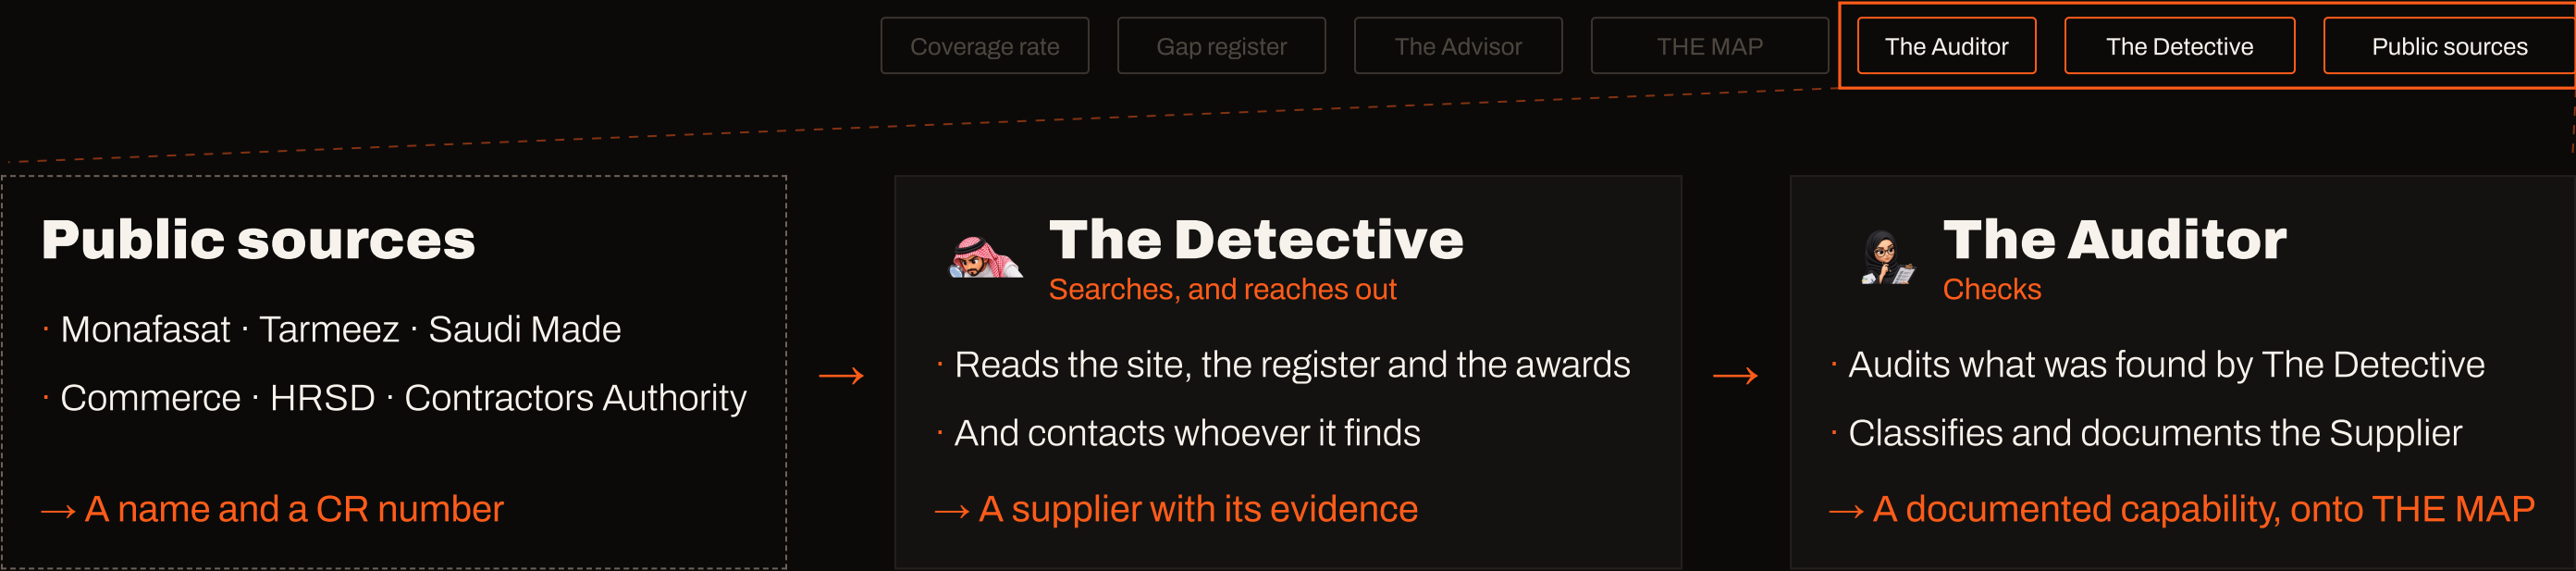

- ✓ It reads the site, the register, the awards and the catalogues
- ✓ Two minutes per factory instead of a full day
- ✓ 24 hours without stopping, and in parallel
- ✓ And it never forgets a thing it found

And 35 years becomes under ten hours.

KAMIN's map of local industrial capability

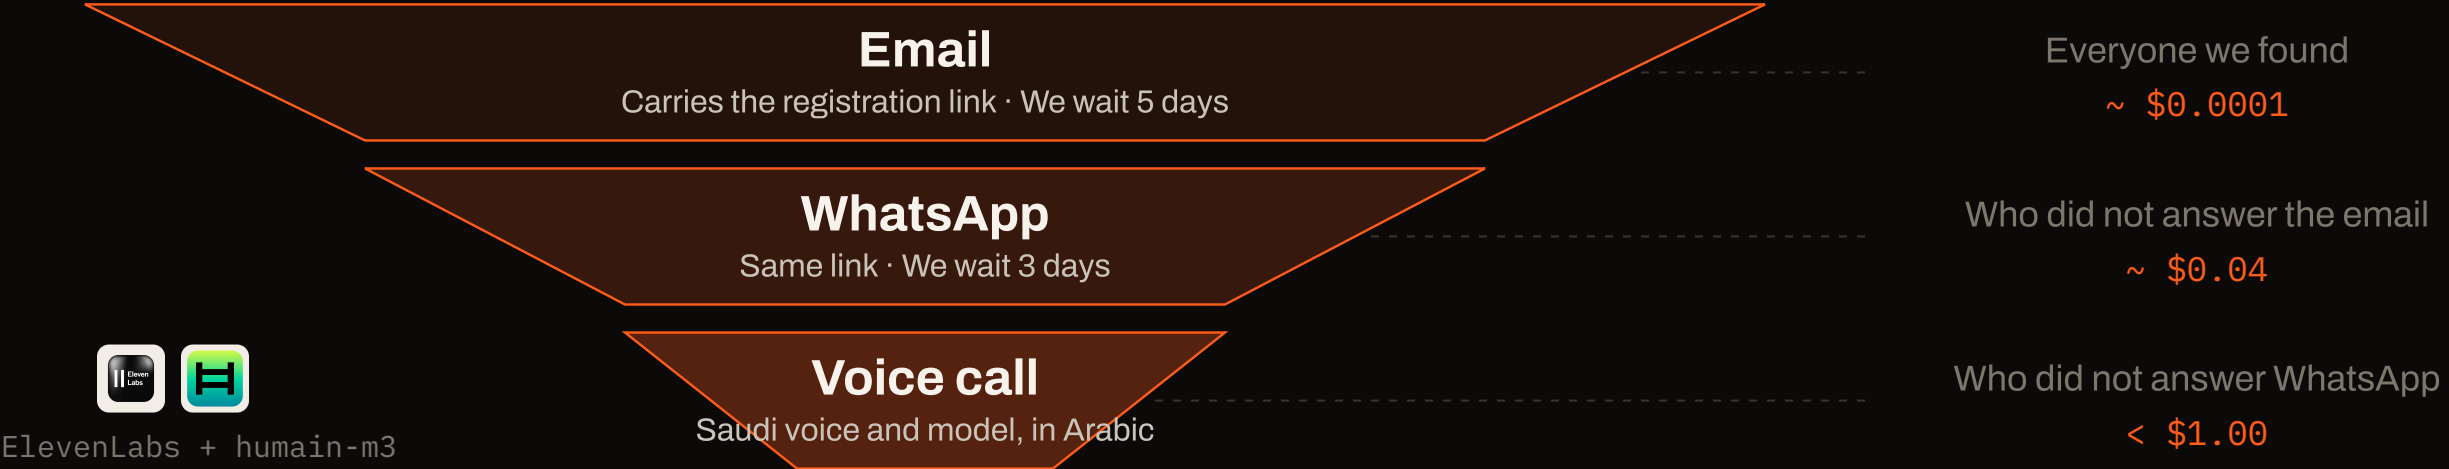

What happens before it reaches THE MAP?

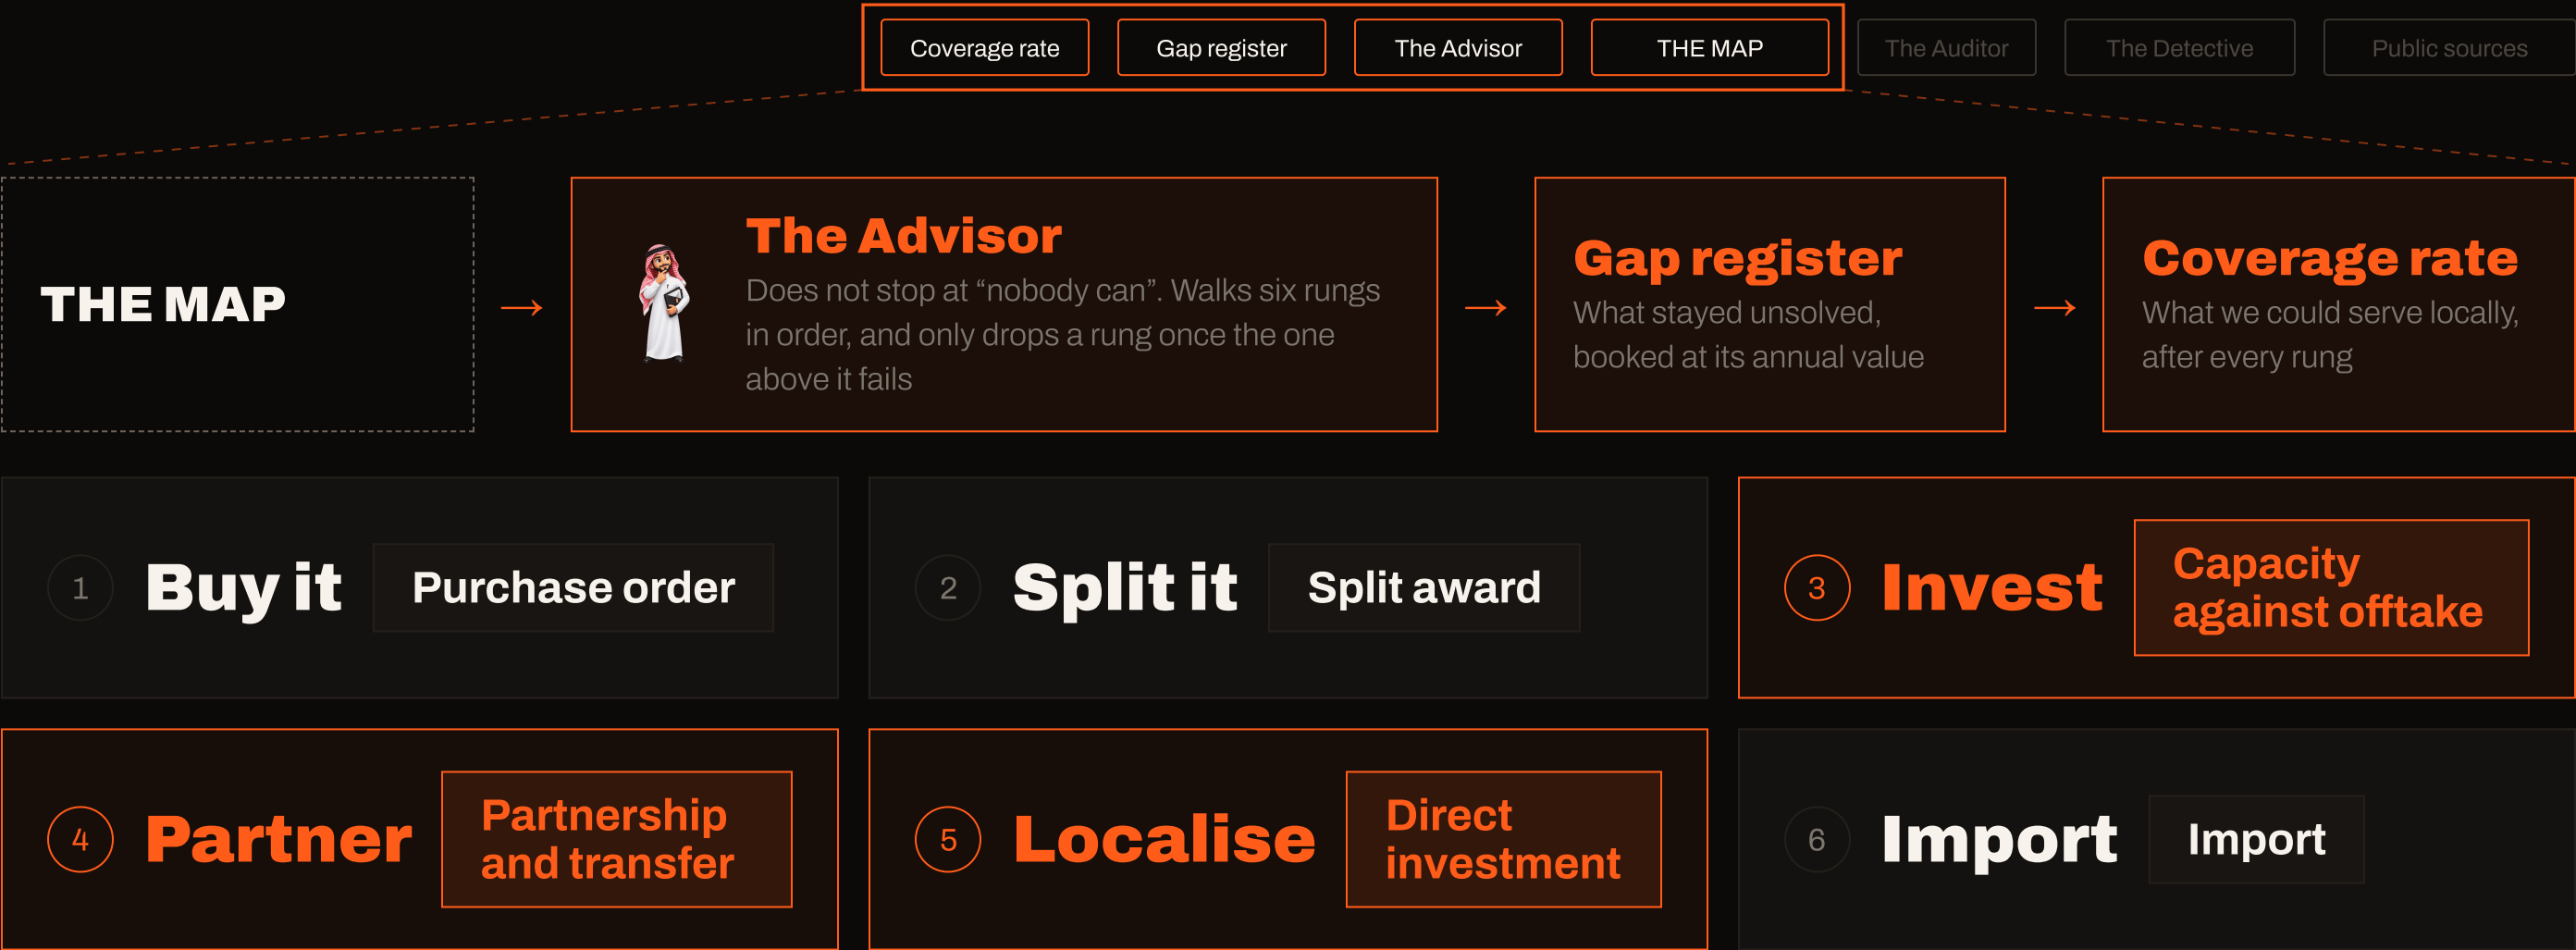

Outreach by The Detective

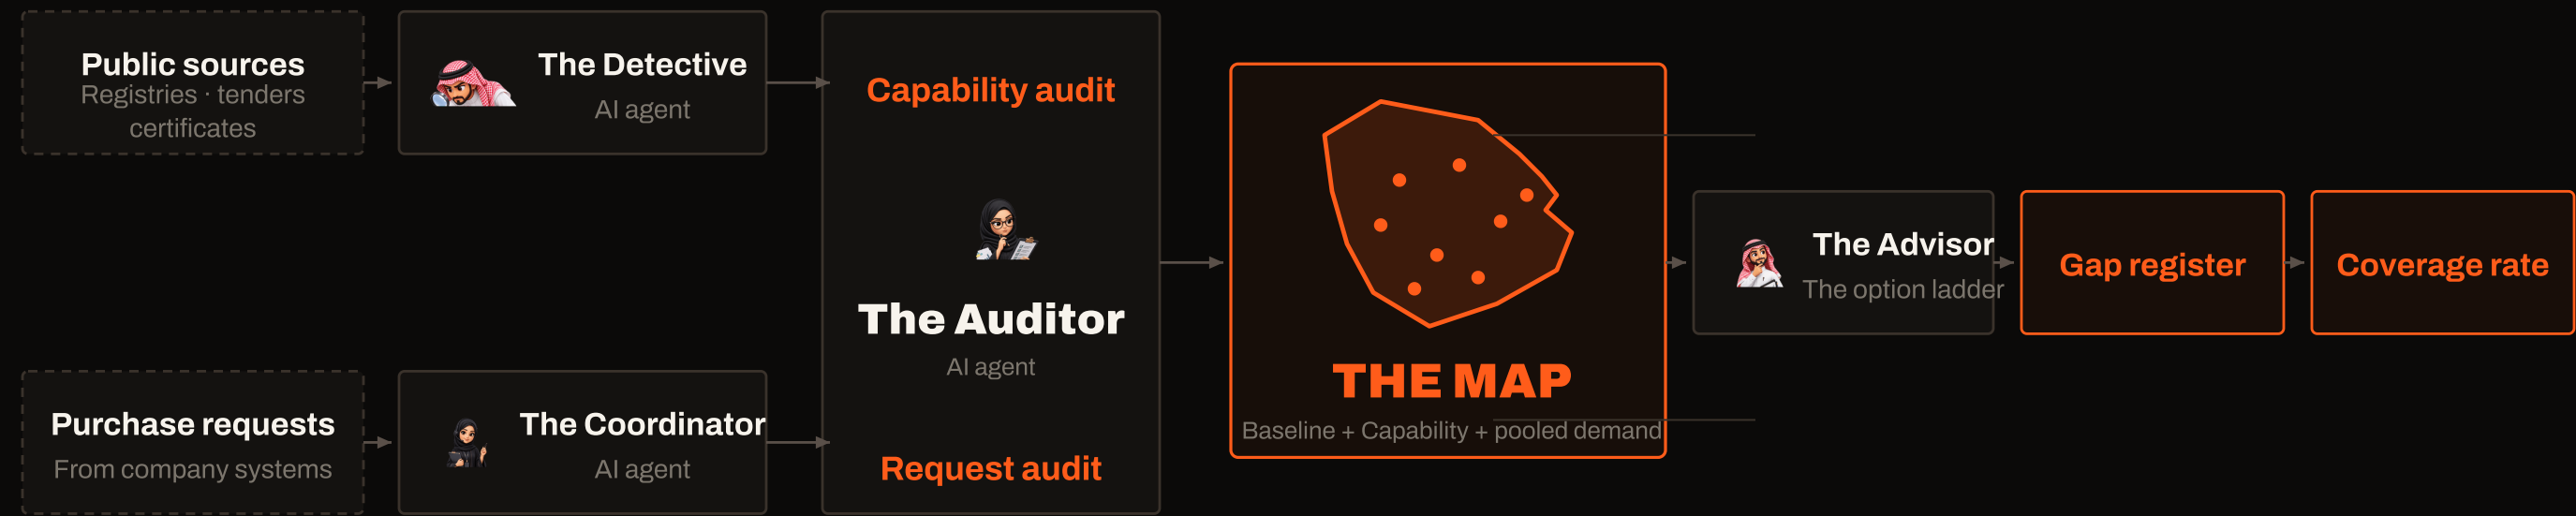

And every message carries the registration link for MUSAHAMA.

And when **THE MAP** says nobody can?

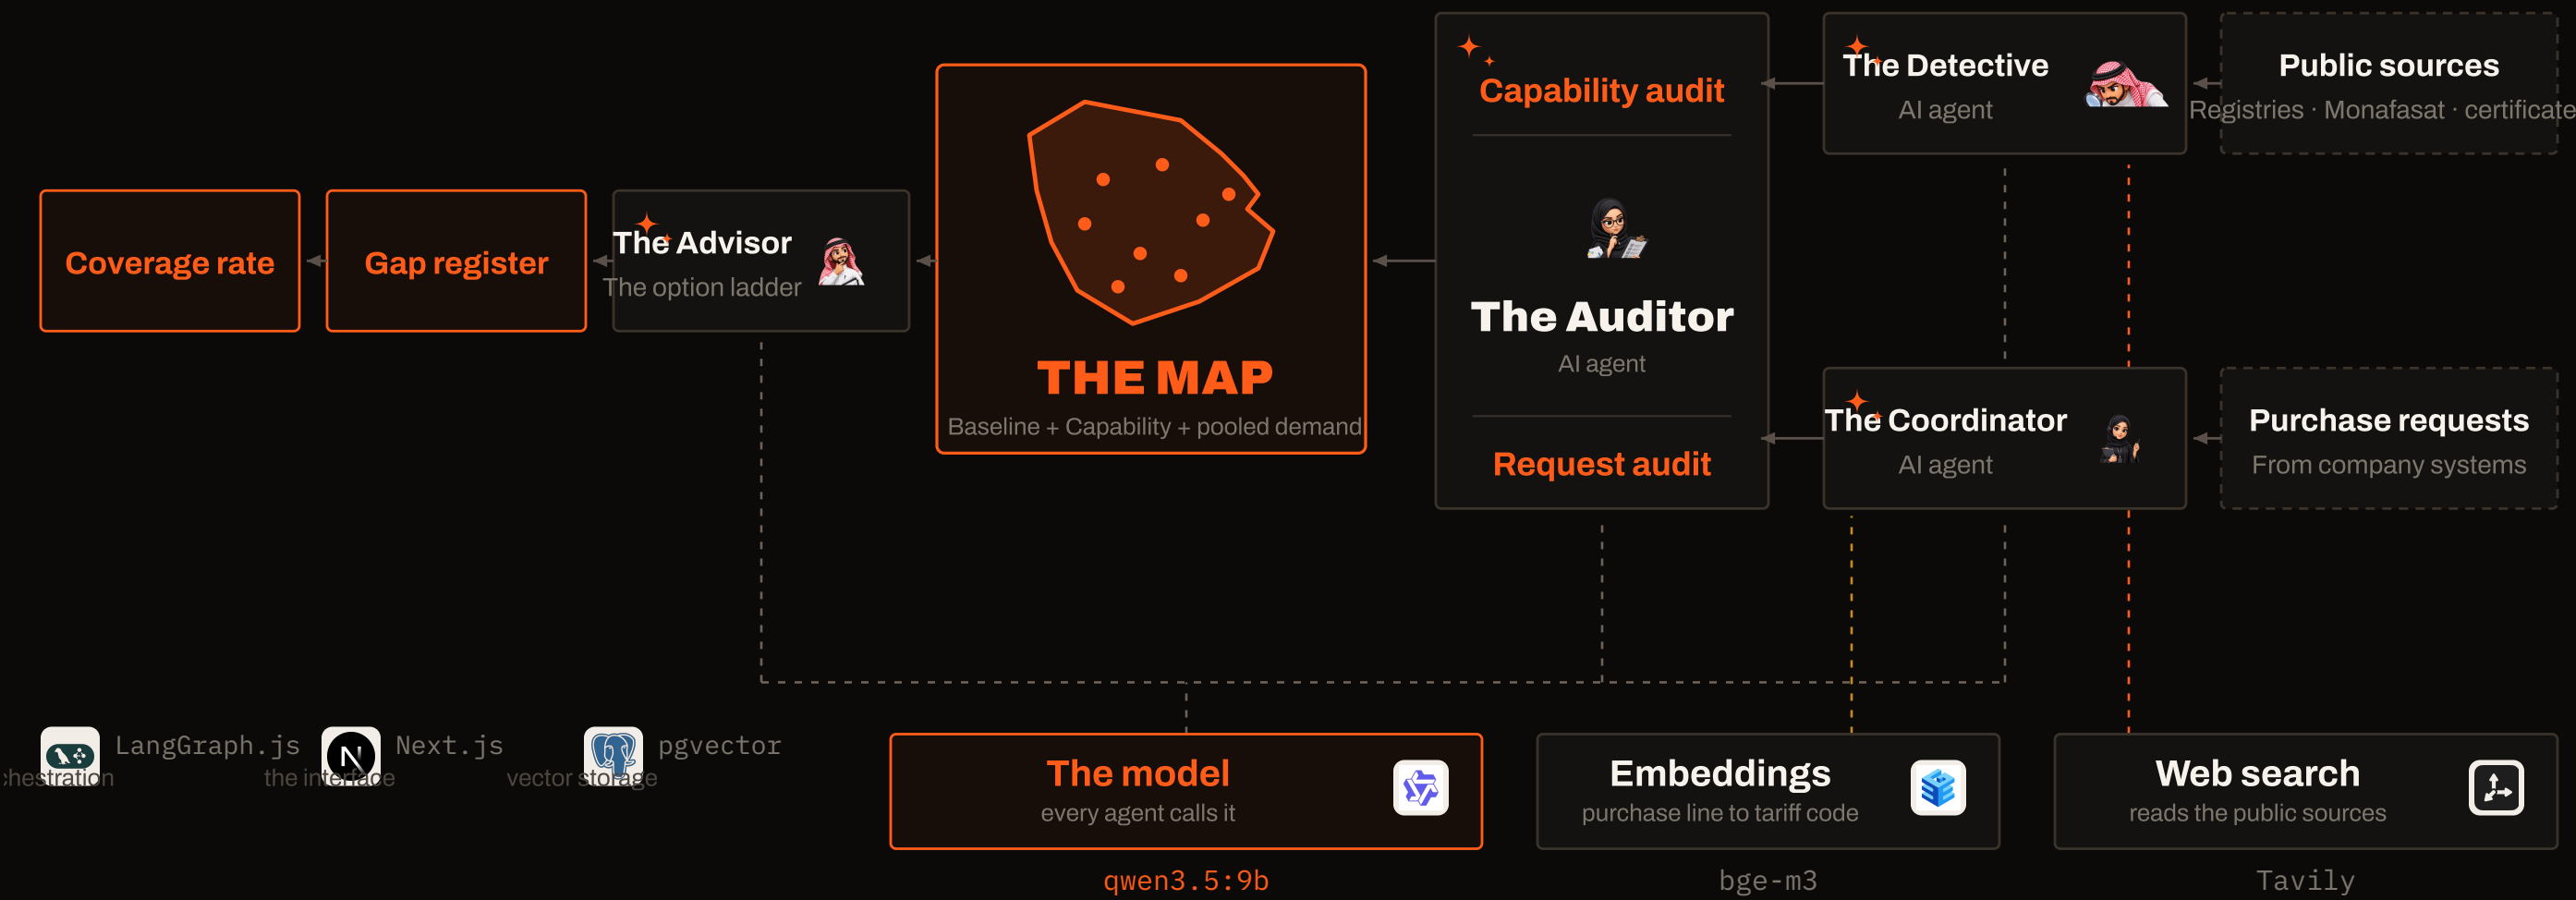

KAMIN's map of local industrial capability

What runs THE MAP?

The same map. The dotted lines underneath are what feeds the agents ✨ AI agent

Sourced by KAMIN

KAMIN found and identified them from public evidence. They still need to register on MUSAHAMA.

Verified by KAMIN

KAMIN reached them, they registered on MUSAHAMA, and we audited and verified them.

	The old way	KAMIN
Time	35 years	Under 10 hours
Cost	Millions of riyals	Under \$4,000
Freshness	A report born stale	Updates itself

The same work. Just in hours, not years.

KAMIN today.

The counts come from the database, the cost from the invoices.

What it has built

15,025

suppliers on the map, 152 of them absent from Tarmeez

51,992

capabilities on record: one supplier, one product, to a spec

4,836

registered tariff codes, out of 10,794 in the classification

1,146

agent runs, over 73 hours of run time

What it cost

Zero riyals

on 2.93 million input tokens

qwen3.5:9b runs locally on Ollama, and Tavily is on its free tier with its results cached, so re-running costs nothing.

And the same tokens, priced at another provider:

Ollama · qwen3.5:9b	\$0
Gemini Flash	\$2
GPT-4o	\$12
Claude Opus	\$81

MUSAHAMA knows who
registered.
KAMIN knows who never
raised a hand.

We are not a replacement for the platform. We are the layer underneath it.

Three people. **Thousands of agents.**

The team building KAMIN.
